

M. VENKAT SATISH

Software Engineer | Full Stack Development | Cloud & Backend Systems

☎ +91-8790402776 | ✉ 2320090082csit@gmail.com | 🌐 venkat satish | 🐙 venkatsatish03

Professional Summary

Final year Computer Science student at KL University specializing in full-stack development, blockchain systems, and cloud infrastructure. Experienced in building decentralized applications, RESTful APIs, and machine learning-integrated platforms across academic and internship settings. Co-inventor of a provisionally patented blockchain-based healthcare data management system, with additional exposure to cybersecurity practices, cloud platforms, and competitive programming.

Education

K L (Deemed to be) University, Hyderabad

May 2023 – July 2027

Bachelor of Technology (B.Tech) in Computer Science & Information Technology – Specialization: Cybersecurity & Blockchain

GPA: 8.73/10

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Distributed Systems, Cryptography, Cloud Computing, Software Engineering, Object-Oriented Design

Work Experience

Tsaro Labs Pvt. Ltd. – AI & Cybersecurity Intern

June 2026 – July 2026

On-site

Hyderabad, India

- Building a full-stack License Plate Recognition system as part of a 3-member team, integrating YOLOv8 for vehicle and plate detection, EasyOCR for text extraction, and Real-ESRGAN for image super-resolution, with a React.js frontend for live monitoring.
- Designing the end-to-end detection pipeline architecture, coordinating model integration with frontend display components to deliver real-time plate recognition results.
- Contributing to an OSINT-focused web scraping platform for publicly available social media intelligence, working with FastAPI, Playwright, and PostgreSQL to support investigative data collection and analysis workflows.

Oasis Infobyte – Web Development Intern (Remote)

Aug 2025 – Sep 2025

- Delivered 4 responsive React.js web applications with component-based architecture, state management, and cross-browser compatibility; completed all deliverables on schedule within a one-month internship.
- Reduced rendering bottlenecks through targeted code refactoring, improving application load performance and overall user experience.

Algorand Blockchain Club – Chair

Feb 2025 – Present

Student Leadership, KL University

Hyderabad, India

- Directed a 70-member developer community, overseeing 3 blockchain project teams building decentralized applications (dApps) across credential verification, supply chain, and healthcare domains.
- Organized 20+ national-level technical events – hackathons, bootcamps, and seminars – reaching 1,500+ student participants; received the Leadership Excellence Award from the Algorand Foundation and the Student Activity Center.
- Mentored student teams through the full project lifecycle – from architecture decisions and smart contract design to frontend integration and final deployment – promoting clean code standards and version control practices.

Projects

OjasRaksha – Decentralized Healthcare Platform (Provisional Patent Pending – Co-Inventor)

Blockchain,

Solidity, React.js, Python

- Architected a patient-controlled medical records platform with consent-based access control, role-based dashboards for 5 stakeholder types (patients, doctors, hospitals, labs, and insurers), and immutable audit logs tracking 100% of data access events.
- Enforced data privacy through off-chain encrypted storage; incorporated emergency access, data erasure, and beneficiary management workflows aligned with GDPR principles.
- Filed a Provisional Patent as co-inventor for the platform's innovative approach to decentralized, patient-governed healthcare data management.

CollabChain – Credential Verification Platform (Algorand Web3 Hackathon Finalist) *Algorand, Smart Contracts, React.js, Node.js*

- Constructed a blockchain application for tamper-proof digital credential issuance; connected the React.js frontend to a smart contract backend, enabling real-time on-chain verification for 3 institution types.
- Reached the finals of a national Web3 hackathon hosted by the Algorand Foundation, competing against university teams from across the country focused on decentralized application development.

StockWise – AI-Based Stock Trend Analysis Platform *Python, React.js, Scikit-learn, Pandas, NumPy, NLP*

- Contributed to a machine learning stock trend prediction platform by taking full ownership of the React.js frontend – comprising interactive charts, prediction confidence displays, and historical trend visualizations.
- Executed manual end-to-end testing of the data ingestion and ML pipeline, validating prediction outputs and ensuring workflow reliability; the model achieved 70–80% directional accuracy across test datasets.
- Incorporated NLP-based sentiment analysis of financial news as an additional model input, enhancing the platform’s data-driven forecasting capability.

Forensic Shield v0.4 – USB Security & Data Integrity Monitor *Python, Flask, SHA-256*

- Engineered a USB threat-detection utility that performs SHA-256 hash verification on all files upon device connection, blocking unauthorized script execution and flagging malicious payloads before they run.
- Launched a Flask real-time monitoring dashboard that logs device events, threat alerts, and hash-verification status across all connected drives.

Restaurant Table Reservation System *React.js, Node.js, Express.js, PostgreSQL, Spring Boot*

- Designed a full-stack booking platform with RESTful APIs for scheduling, availability checks, and session handling; reduced query latency through PostgreSQL index tuning and schema normalization.
- Structured secure API services and booking workflows to manage user interactions, input validation, and concurrent transaction processing.

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, C, C++, Java (Fundamentals), SQL, Solidity
Frontend: React.js, HTML5, CSS3, Responsive Web Design
Backend & Frameworks: Node.js, Express.js, Spring Boot, Flask, REST API Design
DevOps & Tools: Docker (basic), GitHub Actions, Git, GitHub, VS Code, Kali Linux
Databases: PostgreSQL, MongoDB, MySQL
Cloud: Microsoft Azure, AWS
Blockchain & Security: Algorand, Smart Contracts, Solidity, SHA-256, OWASP, Cryptography
Data & Machine Learning: RAG, Scikit-learn, Pandas, NumPy, NLP, Power BI, Tableau
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Distributed Systems, Database Management Systems

Licenses & Certifications

AWS Certified Cloud Practitioner – Amazon Web Services	Apr 2026
Microsoft Certified: Azure AI Fundamentals (AI-900) – Microsoft	Mar 2026
MongoDB Associate Developer – Python – MongoDB	Dec 2025
Automation Anywhere Advanced RPA Professional – Automation Anywhere	Dec 2025
Aviatrix ACE – Multicloud Network Associate – Aviatrix	Dec 2025

Achievements & Competitive Programming

- **Smart India Hackathon 2025 (SIH-2025):** Selected as a national finalist, representing KL University in India’s largest government-sponsored student hackathon.
- **Algorand Web3 Hackathon:** Reached the finals of a national Web3 hackathon hosted by the Algorand Foundation, competing against university teams from across the country focused on decentralized application development.
- **TCS CodeVita Season 12:** Achieved Global Rank 4903 in the first year of B.Tech, competing against 100,000+ participants worldwide.
- **Leadership Excellence Award:** Recognized by the Algorand Foundation and the Student Activity Center for organizing 20+ national-level technical events with 1,500+ student participants.
- **Competitive Programming:** Solved 500+ algorithmic problems; LeetCode Rating: 1414 | CodeChef: 1515 (2-Star) | Codeforces: 870; participated in 90+ coding contests across platforms.
- **Patent:** Filed a provisional patent as co-inventor for OjasRaksha – a decentralized, patient-controlled healthcare data governance system built on blockchain technology.
